Anexa C

Complicatii si/sau comorbiditati (CC), excluderi ale complicatiilor si/sau comorbiditatilor, nivelul complexitatii diagnosticului (NCD) si calcularea nivelului complexitatii cazului (NCC)

C.1 Introducere

Aceasta anexa prezinta modul in care diagnosticele secundare influenteaza complexitatea cazului:

1. Care diagnostice secundare influenteaza complexitatea
2. Cum se aloca nivelul de complexitate al acestor diagnostice
3. Cum se calculeaza nivelul de complexitate al cazului in functie de nivelul de complexitate al acestor diagnostice

Aceasta anexa trebuie considerata in contextul intregului proces de grupare, care este discutat in Introducere.

C.2 Complicatii si comorbiditati

Complicatiile si/sau comorbiditatile (CC) sunt diagnostice secundare a caror prezenta determina un consum de resurse semnificativ mai mare.

In RoviDRG, sunt recunoscute 2.927 coduri de diagnostic ca CC.
Un diagnostic secundar isi poate pierde statutul de CC daca (i) este strans legat de diagnosticul principal sau (ii) este un duplicat al unui cod care apare altundeva pe inregistrare.

Cu RoviDRG, statutul de CC al unui diagnostic poate fi afectat de sexul pacientului. De exemplu, C79.6 *Tumora maligna secundara a ovarului* este CC pentru femei, dar nu pentru barbati.

Codurile de diagnostic folosite pentru alocarea CC sunt:
- Toate diagnosticele (GDRG obstetricale O1011-O3052)
- Toate diagnosticele exceptand diagnosticul principal (toate celelalte GDRG)

C.3 Nivelul complexitatii diagnosticului (NCD) si nivelul complexitatii cazului (NCC)

Nivelurile complexitatii diagnosticului (NCD) au fost dezvoltate printr-o combinatie a judecatei medicale si a analizei statistice. NCD pot lua valori de la 0 la 4. Valorile NCD pot varia de la un GDRG la altul. De exemplu, diagnosticul J96.0 *Insuficienta respiratorie acuta* are o valoare NCD de 2 in GDRG B311 *Atac cerebral* , dar o valoare NCD de 3 in GDRG B312 *Tulburari ale nervului periferic si cranian* .

Valoarea actuala a NCD data de un diagnostic depinde de conditia ca acel cod sa fie un CC valid si de a fi clasificat ca minor, moderat, sever sau catastrofal in termenii GDRG pentru inregistrare. Adica:

NCD = 0 - codul nu este o complicatie/comorbiditate; sau
- codul este o complicatie/comorbiditate, dar este strans legat de diagnosticul principal; sau
- este identic cu alt cod care apare altundeva pe inregistrare;

NCD = 1 - codul este o complicatie/comorbiditate minora;
NCD = 2 - codul este o complicatie/comorbiditate moderata;
NCD = 3 - codul este o complicatie/comorbiditate severa;
NCD = 4 - codul este o complicatie/comorbiditate catastrofala

Numai codurile CC primesc o valoare mai mare de zero.

Nivelul complexitatii cazului (NCC) este o masura a efectului cumulativ al complicatiilor si comorbiditatilor unui pacient, si este calculat pentru fiecare episod. NCC poate lua valori intre 0 si 4:

0 = caz fara CC;
1 = caz cu CC minore;
2 = caz cu CC moderate;
3 = caz cu CC severe; si
4 = caz cu CC catastrofale.

Algoritm

1. Se exclud DGS care nu sunt CC
2. Se exclud DGS foarte asemănătoare cu DGP
3. Se exclud DGS care nu concordă cu sexul pacientului
4. Se caută NCD maxim pentru GDRG respectiv şi:

a. Dacă există o singură CC cu această valoare se setează NCC=NCD maxim
b. Dacă există mai mult de o CC cu această valoare se setează NCC= NCD maxim+1

Notă: Dacă procesul de excludere din primii trei paşi elimină toate DGS, NCC=0

Lista NCD

Nivelul de complexitate a diagnosticelor

Nivelul de complexitate a diagnosticelor (NCD) este utilizat pentru determinarea nivelului de complexitate a cazului (NCC).

NCD depinde de grupul DRG (GDRG) în care este clasificat cazul şi, uneori, de sexul pacientului.

În această listă sunt prezentate pentru fiecare diagnostic NCD pe care le poate avea şi GDRG pentru care este valabil NCD respectiv.

Notă: Sex=0 înseamnă că NCD nu depinde de sex, Sex=1 înseamnă că NCD este valabil doar pentru sexul masculin, Sex=2 înseamnă că NCD este valabil doar
